

Estimated time needed: 10 minutes In this lab, you will create and execute stored procedures on IBM Db2 using SQL. A stored procedure is a set of SQL statements that are stored and executed on the database

Hands-on Lab: Stored Procedures

server. So instead of sending multiple SQL statements from the client to the server, you encapsulate them in a stored procedure on the server and send one statement from the client to execute them. Also, stored procedures can be useful if you have an SQL query that you write over and over again. You can save it as a stored procedure, and then just

Software Used in this Lab

call it to execute it. In stored procedures, you can also pass parameters so that a stored procedure can act based on the passed parameter values.

In this lab, you will use an IBM Db2 Database. Db2 is a Relational Database Management System (RDBMS) from IBM, designed to store, analyze and retrieve data efficiently.

on IBM Cloud, and you will need to follow the lab below first:

To complete this lab you will utilize a Db2 database service on IBM Cloud. If you did not already complete this lab task earlier in this module, you will not yet have access to Db2

The data used in this lab is internal data. You will be working on the **PETSALE** table. ID 🔺 **ANIMAL SALEPRICE**

• Hands-on Lab: Sign up for IBM Cloud, Create Db2 service instance and Get started with the Db2 console

Cat 450.09 666.66 3 **Parrot** 50.00

5 Goldfish

4 Hamster 60.60 48.48

This lab requires you to have the PETSALE table populated with sample data on Db2. You might have created and populated a PETSALE table in a previous lab. But for this lab, it is recommended you download the PETSALE-CREATE-v2.sql script below, upload it to Db2 console and run it. The script will create a new PETSALE table dropping any previous PETSALE table if exists, and will populate it with the required sample data.
• PETSALE-CREATE-v2.sql
Please go through the lab below to learn how to upload and run a script on Db2 console (for this case, you need don't need to know anything else other than how to upload and run a script):
Hands-on Lab: Create tables using SQL scripts and Load data into tables

Objectives After completing this lab, you will be able to:

 Create stored procedures Execute stored procedures Instructions When you approach the exercises in this lab, follow the instructions to run the queries on Db2:

• Go to the Resource List of IBM Cloud by logging in where you can find the Db2 service instance that you created in a previous lab under Services section. Click on the

• If needed, follow Hands-on Lab: Sign up for IBM Cloud, Create Db2 service instance and Get started with the Db2 console
